                                                                                                                                                                                                                                                                                                                           The invention relates to a method of making a transgenic fusion protein comprising providing a transgenic animal which includes a transgene which provides for the expression of the fusion protein, allowing the transgene to be expressed, and recovering the fusion protein, from the milk of the transgenic animal. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of colon, breast, prostate, ovarian and endometrial cancers. The present sequence represents the amino acid sequence of a peptide linker.
                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Making a transgenic fusion protein using a transgenic animal having a transgene expressing the fusion protein, useful for the diagnosing, preventing or treating colon, breast, prostate, ovarian and endometrial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  gene therapy; tra

The construct comprises a pain relieving agent linked to a ligand moiety that selectively binds to or is taken up by the tissue associated with the painful interior disease site. The construct is used for treating pain associated with an interior disease este. Since the pain-relieving agent is delivered by the ligand to the disease site intractable pain situated in the interior of the body such as caused by various tumours, such as breast cancer, lung cancer, Hodgkin's and non-Hodgkin's lymphoma, and neuroblastoma, and ischaemic

Novel compound comprising major histocmpatibility complex-peptide complexes, used to modulate immune responses.

Example 3; Page 146; 166pp; English.

The present sequence represents a major histocompatibility complex (MHC) Class II H domain spacer. This protein was used as a replacement for the C class II molecules in an example of the invention CC detailing the construction of human IgG3-HLA fusion proteins. Absence of the H domain or a suitable spacer would result in misfolding of the MHC C class II molecule and the correct MHC binding site would not be formed. CC this invention comprises a compound which contains one or more major CC specific for a cell surface marker. The complexes, and an antibody CC specific for a cell surface marker. The complexes comprise an MHC class I specific for a cell surface marker. The complexes comprise an MHC class I class II alpha chain, a heft class II beta chain, and an antigenic peptide bound in the MHC groove. Alternatively, the complexes may comprise an MHC class II beta chain, and an antigenic compited bound in the MHC groove. The complexes are linked to the carboxyl terminus of the antibody. The compounds of the invention can be used as a creatine to modulate an immune response. The compounds of the invention can be used as a creatine to modulate an immune response. The compounds of the invention can be used as a creatine to modulate an immune response. The compounds of the invention compounds of the invention compounds of the invention and disparable infections; autoimmune diseases (e.g. hepatitis and meningitial); bacterial infections (e.g. hepatitis and gingivitis); conditions (e.g. asthma). The compounds of the invention may also be used in the treatment of organ rejection or graft-versus-host disease (GVHD)

                                                                                                                                                                                                                                                                  CC This is a novel fusion protein comprising a factor VIIa (FVIIa) Kunitz CC type active site inhibitor domain sequence (AMN18553), a linker domain cC sequence, and a tissue factor (TF) domain sequence which is a human CC tissue factor variant hTFAA (AAW18556). This novel fusion protein has a Kunitz domain linked at its C-terminus via the peptide linker to the N-CC terminus of hFTAA. The novel fusion protein can be used for inhibiting thuman tissue factor-FVIIa (TF-FVIIa) procoagulant activity in a mammal. CC It can be used to treat TF-FVIIa related diseases like chronic CC including vascular disorders such as deep venous thrombosis, arterial CC thromboembolic diseases or disorders associated with fibrin formation CC including vascular disorders such as deep venous thrombosis, arterial CC treat acute and chronic disorders such as inflammation, septic Used to treat acute and chronic disorders such as inflammation, septic CC shock, adult respiratory distress syndrome, septicaemia, hypotension, CC disseminated intravascular coagulopathy and other diseases. Fusion CC sequence is not explicitly shown in the specification; it has been CC components alone or a non-covalent mixture of the two. Note: This sequence is not explicitly shown in the specification; it has been CC sequence given in Page 43 followed by a hTPAA sequence (AAW18553), a linker CC sequence given in Page 43 followed by a hTPAA sequence (AAW18556)
                                                                                                                                                                                        Query Match

CC binding domain capable of binding to an inducing site on the target protein, a second binding domain capable of forming neutralising complex cc with an induced epitope of the target protein and a linker connecting the binding domains. sCD4-SCFV(17b) comprises a soluble CD4 fragment (containing domains D1 and D2) fused to a single chain FV portion of CC antibody 17b via a linker. sCD4-SCFV(17b), its variant, analogue or CC mimetic is used for inactivating pp120 protein of HIV, and for combinant gp120 protein of HIV, and for containing HIV. It is also used for blocking and preventing the binding CC of the viral or recombinant gp120 protein to soluble CD4 or lymphocyte CC data and for inhibiting HIV replication. The chimeric proteins is CC therefore useful for treating HIV infection and also AIDS. It is are particularly useful in the prevention of infection during or immediately after HIV exposure (e.g., mother/infant transmission, post-exposure CC prophylaxis, and as a topical linhibitor) and for providing long term CC resistance to HIV infections and AIDS. Gene therapy is used to secrete CC the bispecific protein at mucosal surfaces, such as the vaginal, rectal CC reactive with neutralising antibody with high in vivo activity and no Fc-mediated undesirable targetting properties. When the fusion protein is CC mediated undesirable targetting proteins, it has minimal immunogenicity and toxicity in humans which is of great value in prevention of infection CC during or immediately after HIV exposure

CC binding to two sites of its target protein. The protein capable of the binding to two sites of its target protein. The protein comprises a first countries of the starget protein and a linker comprises a first countries. Scholars of binding to an inducing site on the target protein, a second binding domain capable of forming neutralising complex cut with an induced epitope of the target protein and a linker connecting the binding domains. Schol-ScFv(17b) comprises a soluble CD4 fragment (containing domains D1 and D2) fused to a single chain Fv portion of mimetic is used for inactivating gpl20 protein of HIV, and for neutralising HIV. It is also used for blocking and preventing the binding confidence of the viral or recombinant gpl20 protein to soluble CD4 or lymphocyte confidence useful for treating HIV infection and also AIDS. It is are particularly useful in the prevention of infection during or immediately capacitic protein at mucosal surfaces, such as the vaginal, rectal capacitic protein at mucosal surfaces, such as the vaginal, rectal creative with neutralising antibody with high in vivo activity and no Fc experience with neutralising antibody with high in vivo activity and no Fc expective with neutralising antibody with high in vivo activity and no Fc expected undesirable targetting properties. When the fusion protein is substantially derived from human proteins, it has minimal immunogenicity can convolve the full length CD4 coding sequence was excised from the plasmid pCB-3 using restriction enzymes Stul and Spel. Synthetic oligonucleotides (AAA54046) were ligated and used to regenerate the cleaved Stul site and the next two bases of the CD4 cONA and to produce an Spel (D14 and encodes the 37 amino acid intermediate linker as their described from the plasmid domain of CD4 and encodes the 37 amino acid intermediate linker as their described from its step shall site, forming pCD2. The 17b SCFv with the exact linker capacitic pmt tes step shall be a pCC3 and capacity and the capacitic pm its sequence was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Fusion protein; HIV; human immunodeficiency virus; antibody; Fv; acquired immune deficiency syndrome; neutralisation; infection; gene therapy; CD4; gp120; glycoprotein; resistance; vaccination; binding domain; single chain antibody; chimera; chimeric protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel neutralizing bispecific fusion proteins effective in viral such as HIV neutralization, comprises two different binding domains, inducing-binding domain and induced-binding domain functionally linked by linker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Example 1; Page 48;

                                                                                                                                                         molecule (I) or its variants, joined at one end to a first end of an immunoglobulin Fc fragment (II), without any linker between (I) and (II) or with a first linker between (I) and (II). The method is useful for treating tumours and viral infections including hepatitis B. The IFN-Fc hybrids have a much more longer half-life in vivo than the native IFNalpha. They are suitable for treating tumours such as lymphomas and leukaemias, as these products have the server treating tumours in time in the vasculature and will not penetrate undesired sites. The hybrids have been shown to ablate tumours in an animal model. At equivalent molar dosage of native IFN and the hybrid, the hybrid provides a several hundred fold
                                                                 efficacy at the same dosage and less frequent administration. This is the amino acid sequence of a linker that can be used to create an interferonbeta (INF-beta)-IgG4 fragment of crystallisation (Fc) fusion protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Interferon-beta; INF-beta; fragment of crystalisation; Fc; IgG4;

      CC This is a novel fusion protein comprising a factor VIIa (FVIIa) Kunitz CC type active site inhibitor domain sequence (AAW18553), a linker domain CC tissue factor (TF) domain sequence which is a human CC tissue factor variant hTFAA (AAW18556). This novel fusion protein has a CC terminus of hFTAA. The novel fusion protein can be used for inhibiting CC human tissue factor FVIIa (TP-FVIIa) procoagulant activity in a mammal. CC It can be used to treat TF-FVIIa related diseases like chronic CC including vascular disorders such as deep venous thrombosis, arterial CC thromboembolic diseases or disorders such as deep venous thrombosis, arterial CC retenoses following angioplasty. The novel fusion protein can also be used to treat acute and chronic disorders such as inflammation, septic CC shock, adult respiratory distress syndrome, septicaemia, hypotension, CC proteins in which a FVIIa active site inhibitors and a tissue factor are CC covalently linked are more potent inhibitors of FVIIa than the individual components alone or a non-covalent mixture of the two. Note: This sequence is not explicitly shown in the specification; it has been linked.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                              mammals, to treat e.g. thrombosis and restenosis.

                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a composition (C) for enhancing an immune CC cresponse against an antigen or a virus-like particle (VLP) bound to at least one antimal. (C) CC comprises a virus-like particle (VLP) bound to at least one antimal. Also CC VLP capable of being recognised by the immune system of the animal. Also Cdescribed: (1) enhancing an immune response against an antigen or a VLP CC in an animal comprising introducing (C) into the animal; (2) vaccines CC comprising (C) together with a pharmaceutical diluent, carrier or CC excipient, (3) immunistery or treating an animal comprising administering the vaccine, and (4) enhancing anti-viral protection in an animal comprising introducing (C) into the animal. (C) CC has cytostatic, virucide, antibacterial antiparasitic, fungicide, CC antiallergic, immunosuppressive, antiaddictive, antiparasitic, currical cused for enhancing anti-viral protection, costoppic, ostoppathic, CC antithermatic and antiarthritic activities. (C) or the vaccines can be cused for enhancing anti-viral protection in an animal, or immunising or treating tumours and infectious disease such as viral, bacterial, cC parasitic or fungal infections. The vaccine compositions are also useful for preventing or treating allergies, drug addiction, graft-versus-host CC disease, Ostopporosis, rheumatoid arthritis, or inflammatory autoimmune disease, ostopporosis, rheumatoid arthritis, or inflammatory crepresent sequences used in the exemplification of the present invention
                                                                                                                                                                              밁

New compositions comprising immunostimulatory substances packaged into virus-like particles, useful as a vaccine for enhancing an immune response in animals, e.g. for treating or preventing allergies, tumors or P

Disclosure; Page 75; 322pp; English.

The present invention describes a composition (C) for enhancing an immune response in an animal. (C) comprises a virus-like particle (VLP), and an climunostimulatory substance. The immunostimulatory substance is bound to the VLP, Also described: (1) enhancing an immune response in an animal by city introducing (C) into the animal; (2) producing (C) for enhancing an immune response in an animal by compare the response in an animal by administering comprising (C) together with a comparison of the animal by: (a) administering the vaccine to the animal; (b) priming a T cell response in the animal by administering the vaccine; or (C) boosting a T cell response in the animal by administering the vaccine; or (C) boosting a T cell response in the animal by administering the vaccine; or (C) thas immunostimulant, cytostatic, antiallergic, virucide and cantibacterial activities. (I) can be used in vaccines for enhancing an immune response, in an animal, particularly a mammal or human. (Specifically, (C) is useful for enhancing a B cell response, a T cell response, or a cytotoxic T-lymphocyte (CTL) response. (C) or a vaccine comprising (C) can also be used for immunising or treating an animal, ce.g. humans, sheep, horses, cattle, pigs, dogs, cats, rats, birds, ce.g. humans, sheep, horses, cattle, pigs, dogs, cats, rats, birds, ce.g. humans, sheep, horses, cattle, pigs, dogs, cats, rats, birds, comparison or succines against allergies, tumours (e.g. breast cancers, neuroblastoma, or leukaemial, varal diseases (e.g. influenza, hepatitis, meanimal or succines used in the exemplification of the present invention or succines used in the exemplification of the present invention

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A;Description: catalyzes the hydolysis of peptides
A;Note: Cleaves preferentially after tyrosine, methionine, or arginine
C;Superfamily: calpain small chain; calmodulin repeat homology
C;Keywords: calcium binding; cysteine proteinase; duplication; EF hand;
F;1-54/Domain: glycine-rich <GLY>
F;94-125/Domain: calmodulin repeat homology <EF1>
F;137-169/Domain: calmodulin repeat homology <EF2>
F;170-199/Domain: calmodulin repeat homology <EF3>
F;235-266/Domain: calmodulin repeat homology <EF3>
F;235-266/Domain: calmodulin repeat homology <EF5>

XX (USS
XX (US sCD4-SCFv(17b) is a neutralising bispecific fusion protein capable of binding to two sites of its target protein. The protein comprises a first binding domain capable of binding to an inducing site on the target protein, a second binding domain capable of forming neutralising complex with an induced epitope of the target protein and a linker connecting the binding domains. SCD4-SCFv(17b) comprises a soluble CD4 fragment (containing domains D1 and D2) fused to a single chain Fv portion of antibody 17b via a linker. SCD4-SCFv(17b), its variant, analogue or mimetic is used for inactivating gp120 protein of HIV, and

It is also used for blocking and preventing the binding CC of the viral or recombinant gpl20 protein to soluble CD4 or lymphocyte CC CD4 and for inhibiting HIV replication. The chimeric proteins is CC therefore useful for treating HIV infection and also AIDS. It is are CC after HIV exposure (e.g., mother/infant transmission, post-exposure CC after HIV exposure (e.g., mother/infant transmission, post-exposure CC prophylaxis, and as a topical inhibitor) and for providing long term CC the bispecific protein at mucosal surfaces, such as the vaginal, rectal CC or oral mucosa. The fusion proteins is highly potent, broadly cross-CC reactive with neutralising antibody with high in vivo activity and no FC-CC mediated undesirable targetting properties. When the fusion protein is CC substantially derived from human proteins, it has minimal immunogenicity and toxicity in humans which is of great value in prevention of infection CC during or immediately after HIV exposure
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

This can give rise to plasma membrane binding, enhanced purifiability, micelle formation etc. especially useful in the production of chimeric targeted drugs, to produce micellular or liposomal delivery systems or in enhanced purification and screening of cells, proteins or DNA libraries. This can give rise to plasma membrane binding, enhanced purifiability, micelle formation etc. especially useful in the production of chimeric targeted drugs, to produce micellular or liposomal delivery systems or in enhanced purification and screening of cells, proteins or DNA libraries. Monoclonal antibodies against the T4 protein may be used as vaccines for immunising subject

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         patients. Administration of ST4 effectively inhibits the cell to cell spreading of HIV infection and also the fusion of HIV-infected T4 cells and non-infected T4 cells. The administration of T4 alleviates several symptoms associated with AIDS, and prevents the occurrence of new pathological changes. The ST4 glycoprotein is useful for the prophylaxis and treatment of patients with AIDS. It is also useful as a reagent to identify natural, synthetic or recombinant molecules which act as therapeutic agents or inhibitors of T4+ cell interactions and in diagnostic assays for detection T4 proteins or molecules
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               glycosylated sT4 glycoprotein. Human Immunodeficiency virus (HIV) uses sT4 as a target receptor on T cells. The invention relates to glycosylated sT4 which functions by blocking the binding of HIV to T4 target cells, and can be used for the prophylaxis and treatment of AII

                                                                                                                                                                                                                                                                                                                         region (see AAA50662). Fusion protein CD4Mmu and a nucleic acid encoding it are claimed. Also claimed are a vector comprising the nucleic acid, and a method of producing the fusion protein in secreted form using a transformed host cell. The fusion protein may further comprise a therapeutic agent, radiolabel or NMR imaging agent. The fusion protein can be administered to an animal (including humans) for treatment of HIV or SIV infection, and can also be used in assays for HIV or SIV, imaging additional status. IgM fusion proteins such as CD4Mmu provide complement-
                                                                                                                                                                                                                                                                                     Sequence 416 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is that of fusion protein CD4Mmu comprising the extracellular portion of CD4, which binds to HIV gpl20, linked at its Cterminus to the human IgM heavy chain. To obtain the fusion protein, DNJ encoding CD4 was linked to IgM DNA at the Mst2 site upstream of the CH1

                                                                                                                                                                                                                                                                                                                                                        This invention describes a novel nucleic acid (I) encoding a fusion protein comprising a DNA sequence encoding amino acids 1-173 of CD4 (II) and a DNA sequence encoding a human immunoglobulin (Ig) heavy or light chain (III). The products pf the invention have anti-human immunodeficiency virus (HIV) activity and are capable of binding to gp120. The fusion protein is useful for treating human immunodeficiency virus (HIV) or similar immunodeficiency virus (SIV). This sequence represents the fusion protein CD4Mg which is constructed from CD4 linked to human IgM upstream of the CH1 region

                                                                                                                                                                                                                                                                                                                                                                      This sequence represents the amino acid sequence of glycosylated sT4 glycopyrotein. Human immunodeficiency virus (HTV) uses sT4 as a target receptor on T cells. The invention relates to glycosylated sT4 which functions by blocking the binding of HIV to T4 target cells, and can be used for the prophylaxis and treatment of AIDS patients. Administration of sT4 effectively inhibits the cell to cell spreading of HIV infection and also the fusion of HIV-infected T4 cells and non-infected T4 cells. The administration of T4 alleviates several symptoms associated with AIDS, and prevents the occurrence of new pathological changes. The sT4 glycoprotein is useful for the prophylaxis and treatment of patients with AIDS. It is also useful as a reagent to identify natural, synthetic or recombinant molecules which act as therapeutic agents or inhibitors of T4 cell interactions and in diagnostic assays for detection T4 proteins

Human CD4 extracellular domains 1 and 2 were used in the construction of CD4 oligomerisation fusion proteins. The fusion proteins contain an oligomerisation domain that enables the proteins to bind to one another to form oligomers. The oligomers may be used in an invention relating to a method for screening for compounds with the ability to inhibit a low affinity receptor-ligand interaction. The method uses an interfacial optical assay, such as surface plasmon resonance (SPR). The method is useful for screening candidate compounds for the ability to inhibit interaction between MHC/peptide complex and Total receptor, and MHC/peptide complex and CD8 or CD4 co-receptor. The compounds identified by the above methods which interfere with T cell receptor binding to a particular HLA type molecule are useful as immune inhibit for for transfer of the compounds in the control of the complex and the compounds identified by the above methods which interfere with T cell receptor for transfer of the compounds in the complex and the compounds identified by the above methods which interfere with T cell receptor for transfer of the compounds in the complex and the compounds identified by the above methods which interfere with T cell receptor for transfer of the compounds in the complex and the compounds in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequential screening of candidate compounds library for those which inhibit binding of low affinity receptor-ligand interaction having binding kinetics, using interfacial optical assay.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; CD4; CD4 fusion protein; oligomerisation; receptor-ligand interaction inhibition; surface plasmon resonance; SI T cell receptor binding; NMC binding; carcinoma; autoimmune disease; multiple sclerosis; human immunodeficiency virus; HIV; diabetes;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The specification describes an antibody which is specific for an antigenic fragment of gp120. This antigenic fragment binds to DC-SIGN or is exposed upon gp120 binding of DC-SIGN due to concomitant conformational change. DC-SIGN is a receptor that is specifically expressed on dendritic cells and facilitates infection of T lymphocytes with HIV. DC-SIGN is identical to a HIV-1 gp120-binding C-type lectin. D-SIGN binds ICAM-3 (which is expressed constitutively on T lymphocytes) with high affinity. The antibody of the invention inhibits the trans enhancement of HIV entry into a T cell or macrophage facilitated by dendritic cells. The antibody is useful to treat or prevent HIV infection. The present sequence represents a human CD4 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     An antibody for the treatment or prevention of HIV-infection comprises gpl20 portion which binds to DC-SIGN or is exposed upon gpl20 binding of DC-SIGN due to concomitant conformational chance
                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2001-602565/68

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
cc hinge region polypeptide comprises: a wild-type human IgG1 immunoglobulin Cc hinge region polypeptide; a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; cc where the mutated human IgG1 immunoglobulin hinge region polypeptide contains 2 cysteine residues, where the first cysteine is not mutated; a c mutated human IgG1 immunoglobulin hinge region polypeptide, derived from CC day having 3 or more cysteine residues, where the mutated human IgG1 immunoglobulin hinge region polypeptide contains no more than one c cysteine residue; and a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from CC polypeptide, derived from (a) having 3 or more cysteine residues; where c c the mutated human IgG1 immunoglobulin hinge region polypeptide contains no cysteine residues. The binding domain-immunoglobulin fusion protein is c capable of at least one immunological activity comprising antibody c dependent cell-mediated cytotoxicity (ADCC) and complement fixation. The binding domain polypeptide is capable of specifically binding to an antigen. Also included are an isolated polynucleotide encoding the binding domain-immunoglobulin fusion protein, a recombinant expression construct comprising the polynucleotide (operably linked to a promoter), a host cell transformed or transfected with a recombinant expression
                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a binding domain-immunoglobulin fusion protein comprising a binding domain polypeptide that is fused to an immunoglobulin hinge region polypeptide, an immunoglobulin heavy chain CH2 constant region polypeptide that is fused to the hinge region polypeptide, and an immunoglobulin heavy chain CH3 constant region polypeptide that is fused to the CH2 constant region polypeptide.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  construct, producing the binding domain-immunoglobulin fusion protein, a pharmaceutical composition comprising the binding domain-immunoglobulin fusion protein or polynucleotide and a carrier, and treating a subject having or suspected of having a malignant condition or a B-cell disorder. The binding domain-immunoglobulin fusion protein is useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, carcinoma or sarcoma, rheumatoid arthritis, myasthenia gravis, Grave's disease, type I diabetes mellitus, multiple sclerosis or autoimmune disease. The present sequence is a binding domain immunoglobulin fusion protein associated protein sequence. Note: The sequence data for this patent formed part of the printed specification and is also available in electronic format directly the contexts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Comprising the vector, a method for identifying a nucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence CC that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a agent CC the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound which regulates the expression of the polynucleotides of the expression of a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound that regulates the cc motivity in an animal of one or more of the polypeptides given in the polypeptides or their antibodies. The polynucleotide or more compound that compound that regulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction conjury (CCT) and spared nerve injury (SNI) in an animal (e.g. gene construction) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed constriction that constriction is pactification, which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed constriction of the printed constriction is pactification, which is deferentially expressed during pain. Note:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, xenotransplant rejection or mechanical organ replacement rejection, in a individual. The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lung, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or viral, bacterial or fungal infection. The present sequence represents a protein that is encoded by the mRNA of the invention.

                                                                                                                                                                                                                                   ঠ
                                                                                                                                                                                                                                                                                                                                                             The invention relates to a composition for the treatment or prevention of CC human immunodeficiency virus-1 (HIV-1) infection. The composition CC comprises CD4+ cells that have been transduced with a vector that encodes CC a chimeric CD4 molecule which is capable of being retained in the CC endoplasmic reticulum (ER). The invention also encompasses the use of a CC soluble protein factor produced by CP4+ cells that have been transduced CC with a vector encoding a chimeric CD4 protein, and the use of an CC expression system encoding a chimeric CD4 protein. The ER-localised CC chimeric CD4 molecule binds to the HIV-1 envelope protein gp150, CC resulting in HIV-1 retention in the ER and thereby preventing viral CC comprises CD4 fused to 15 amino acids of the C-terminal domain of the T CC cell receptor CD3epsilon chain; this chimeric CD4 molecule is designated CC CD4epsilon15 (ADA44807). A known chimeric CD4 of similar structure but CC compositions of the invention have an in trans effect on the replication of HIV-1, and may be used to treat and prevent HIV-1 infection. The CC present sequence represents the chimeric CD4 molecule CD4epsilon15, which is specifically claimed for use in compositions of the invention.

The fusion protein is capable of being secreted. The fusion proteins are useful for treating HIV or SIV infections in animals, preferably humans. They are also useful for producing medicaments which can be used for treating HIV or SIV infections. The present sequence represents the fusion protein infections in humans. The present sequence represents the fusion protein cD4Mmu where the CD4 is linked to human IgG1 at the Mst2 site upstream of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New fusion gene encoding immunoglobulin-CD4 fusion proteins, useful in the treatment of HIV or simian immunodeficiency virus infections.
